Subject: Reference – Innovatus Systems, SmartFaceMe application

It is with great pleasure that I have the opportunity to recommend Innovatus Systems and their SmartFaceMe application. The SmartFaceMe application is a facial recognition attendance system that is currently being used by a couple of our clients in South Africa.

We could not have found an easier method to get started as there was no ‘installation of software’ and/or no ‘hardware purchases’ as the system is a cloud-based application. The SmartFaceMe attendance system caters for office-based, remote and in-field staff as it has geo-location capabilities. Staff have to simply take ‘a selfie’ of themselves when they start work (referred to as punch-in) and then another selfie when they finish their work shift (referred to as punch-out). The geo-location (and geo-fencing) capabilities of SmartFaceMe restricts staff to capture punch in/out pictures only where they have been authorized to do so from, and will not work outside of the designated areas of work for the staff/users. There is no need for staff to calculate the number of hours worked per day as this is calculated and reported upon by the system automatically.

The SmartFaceMe system can be integrated to any existing human resources or attendance management system. Daily reports and e-mail alerts are pre-configured to customer requirements. Overall, it is a very user-friendly and intuitive systems to use.

The Innovatus team, themselves are also very friendly, customer-centric and solutions-focused. It has certainly been a pleasure to interact with and engage with the very humble founding- partner and his proactive, easily approachable support team. We look forward to further engagement and solutions from the Innovatus team going forward.

Sincerely,

Jithoo Daya
